

Enhanced Private Pilot Certification Course

LESSON 119 (0.5 GROUND and 1.5 DUAL)

Lesson Objective

During this lesson, the applicant will gain proficiency with maneuvering during slow flight, power-off stalls, power-on stalls, and traffic patterns. The learner should be able to make radio calls with minimal instructor guidance.

Briefing

- Outline the objectives and completion standards of the lesson.
- Establish the student and instructor responsibilities.
- Review homework assigned in the previous lesson.
 - Quiz the student on emergency checklist items and ground reference maneuvers
- Student questions.

Instructor guidance

- For slow flight, the student must demonstrate "pitch for airspeed, power for altitude" independently. If they are still inverting these controls — chasing altitude with pitch and airspeed with power — correct it immediately and use it as a focused teaching point before moving on to stalls.
- During power-off and power-on stalls, watch closely for secondary stalls during recovery. A student who pulls back too aggressively after reducing the angle of attack can enter a secondary stall before establishing a positive climb — demonstrate the consequence if needed and reinforce smooth, coordinated recovery inputs.
- Coordination must be monitored throughout every stall entry and recovery. An uncoordinated stall at this stage of training is a significant safety concern. If the student is entering stalls with the ball out of center, stop and address it before continuing.
- For the traffic pattern, the completion standard requires the student to maintain pattern altitude ± 150 ft and airspeed ± 10 knots without instructor guidance. Before the flight, establish this as the performance target and hold the student accountable to it. If they are

Enhanced Private Pilot Certification Course

consistently outside these tolerances, be specific about it in the debrief.

- Landings should be conducted with minimal instructor guidance at this stage. Resist the urge to call out flare timing or round-out height — give the student the opportunity to feel the aircraft and develop their own landing judgment. Safety-critical interventions should be made without hesitation, but allow minor imperfections to serve as learning opportunities.
- The go-around must be treated as a deliberate, positive decision — not a recovery from a bad approach. If the approach is unstabilized, call for the go-around early and frame it as the correct and professional choice. Students approaching solo flight must be completely comfortable initiating go-arounds independently.
- Recommend liveatc.net for the student's homework to expose them to real towered airport communications. Listening to actual ATC exchanges significantly accelerates radio proficiency and pattern awareness — it is one of the most effective self-study tools available at this stage.
- Use the post-brief to give the student a clear, honest assessment of their readiness for the pre-solo tests and Lesson 120. Identify any specific areas they need to strengthen before Lesson 121 and assign targeted homework accordingly. This is not the time for vague encouragement — the student needs actionable feedback.

Lesson Content (Ground)

Maneuvers, Ground Reference Maneuvers, Normal Traffic Pattern

- Quiz the student on the procedures and address any questions they might have.

Go/No-Go Decision

- The student must make a go/no-go decision depending on:
 - Personal minimums.
 - FIT minimums.
 - Aircraft.
 - Airspace.
- Review the students planning with a focus on:
 - Weather, weight and balance, performance, flight planning, and fuel calculations.
 - NOTAMs, TFRs, FIFs, aircraft documents, and personal documents.
 - Equipment requirements (e.g. flashlight, fuel card, drinking water, view-limiting devices, life jackets, fly away kit, survival kit, etc.)
 - FRAT/TEM/safety considerations for the flight.
- While this is represented by one line item prior to departure, the go/ no-go decision is continuous and should be a consideration even once airborne.

Lesson Content (Dual)

Checklist Procedures

- Re-emphasize the importance of using checklists.
- Have the student run through all the checklists.

Enhanced Private Pilot Certification Course

- Student should be able to perform all briefings.

Preflight Inspection

- Ensure that the student conducted a thorough preflight inspection.

Operation of the Communications and Navigation Units

- Ensure that the student understands how to properly use COMS and NAV units.
- Refer to points of emphasis from lesson 113.

Radio Communication Procedures and ATC Phraseology

- Students should understand and demonstrate proper communication procedures and use of ATC phraseology.
- Refer to points of emphasis from lesson 113.

Visual Scanning and Collision Avoidance

- Emphasize that it is the pilot in command's responsibility to avoid traffic.
- IF YOU SEE SOMETHING, SAY SOMETHING!

Review Previous Exercises as Required

- Review any areas the student might need help with by utilizing the pertinent lesson plans.

Maneuvering During Slow Flight

- Student says, student does.
 - Verify correct procedure.
 - Ensure the student is pitching for airspeed and using power to control altitude.

Power-Off Stalls

- Student says, student does.
 - Verify correct procedure.
 - Stress smoothness and coordination.
 - Guard against a secondary stall.
 - Provide guidance for the student as needed.

Power-On Stalls

- Student says, student does.
 - Verify correct procedure.
 - Provide feedback as needed throughout the maneuver
 - Points of Emphasis.
 - Smoothness.
 - Coordination.

Normal and Crosswind Takeoffs

- The student should conduct the takeoff.

Enhanced Private Pilot Certification Course

- Ensure the runway entry check and the lineup check are completed.
- Ensure proper crosswind correction is maintained.

Traffic Patterns

- The student should establish and execute a proper traffic pattern with little instructor guidance.
- Student should be able to perform normal, crosswind, and rejected takeoffs and landings with little instructor guidance.

Go-Around or Rejected Landing

- Have the student conduct a go-around during one of the traffic patterns.
- Ensure that the correct procedure is conducted.

Normal and Crosswind Landings

- The student should conduct the landing.
- By this lesson, the student should be able to conduct a safe landing with minimal instructor guidance.

Postflight Procedures

- Ensure that the student conducts a thorough postflight inspection.

Post-Brief

- Student self-critique.
- Instructor critique.
- Questions from the student.
- Lesson grading.
- Logbook completion.
- Schedule the next lesson.
- Preview the next lesson → 120.
- Assign homework:
 - Review emergency procedures and checklists.
 - Review ground reference maneuvers.
 - Review towered operations → listen to liveatc.net.

Completion Standards

This lesson is complete when the applicant can:

1. Correctly perform previously learned maneuvers (including radio calls) with minimal instructor guidance
2. Demonstrate proper sequential checklist use for all normal procedures without instructor guidance.

Enhanced Private Pilot Certification Course

3. Perform power-off stalls, power-on stalls, and maneuvering during slow flight maneuvers with minimal instructor guidance.
 - a. Maneuvering during slow flight: maintain altitude ± 150 ft, heading $\pm 20^\circ$, and airspeed ± 10 knots.
 - b. Stalls: maintain directional control $\pm 30^\circ$ of entry heading and altitude loss shall not exceed 250 ft. during recovery.
4. Maintain the recommended traffic pattern altitude ± 150 ft, recommended airspeed ± 10 knots and correct for wind drift without instructor guidance.
5. Perform normal, crosswind, and rejected takeoffs and landings with little instructor guidance.
